Statemachonk -- Statemachinemachine -- syntax

Sort by

Marcus Peter Brendel Elmkvist

Based on example 1 from meta model submission.

```
stateMachine = statemachine("Base")
    .add(
        stateMachine("Guard")
        .add(state("Idle"))
        .add(state("Patrol"))
        .transition("Idle", "Patrol", condition)
        .transition("Patrol", "Idle", condition)
        .start("idle")
    )
    .add(
        stateMachine("Search")
        .add(state("Move to sound"))
        .add(state("search"))
        .transition("Move to sound", "search", condition)
        .transition("search", "Move to sound", condition)
        .start("Move to sound")
    )
    .add(
        stateMachine("Fight")
        .add(state("Move to range"))
        .add(state("Attack"))
        .transition("Move to range", "Attack", condition)
        .transition("Attack", "Move to range", condition)
        .start("Move to range")
    )
    .transition("Guard", "Search", condition)
```

```
.transition("Search", Guard, condition)
.transition("Guard", "Fight", condition)
.transition("Search", "Fight", condition)
.transition("Fight", "Search", condition)
.transition("Fight", "Guard", condition)
.start("Guard")
```

Yoganata Kristanto

This looks interesting.
