Statemachonk - EBNF

Date

Sort by

Marcus Peter Brendel Elmkvist

EBNF:

Name ::= ("A"|"..."|"Z"|"a"|"..."|"z"|"0"|"...")+

state ::= State {" "name" "=" Name "}"

state ::= (state | stateMachine)

Condition ::= ("A"|"..."|"Z"|"a"|"..."|"z")+

transition ::= Transition {" "from" "=" state "to" "=" state "condition" "=" Condition "}"

stateMachine ::= StateMachine {" "name" "=" Name "states" "=" (state+) "transitions" "="

transition* "start" "=" state "}"

Example:

```
Statemachine{
  name = "Base"
  states = [
    Statemachine {
      name = "Guard"
      states = [
        State {
          name = "Idle"
        },
        State {
          name = "Patrol"
        },
        State {
          name = "Attack"
        }
      ]
    }
  ]
  transitions = [
    Transition{
      from = Idle
      to = Patrol
      condition = "Random"
    }
  ]
}
```

```
    },  
    Transition{  
        from = Patrol  
        to = Attack  
        condition = "Enemy In Vision"  
    },  
    Transition{  
        from = Attack  
        to = Idle  
        condition = "Not in Vision"  
    }  
]  
start = Idle  
}  
]  
transitions = []  
start = Guard  
}
```

Yoganata Kristanto

I assume you have some plan to do how to check the transition condition.
